Education

Southern Adventist University 2022 - 2026
B.A Computer Science
- Expected graduation: May 2026

Experience

Unum March 2025 – Present
Scholar Intern Chattanooga, TN
- Engineered a data automation pipeline using Python to extract business day information from Teradata and sync to an internal UI via GraphQL, eliminating manual entry for 700+ users
- Authoring SQL queries to extract and analyze financial metrics across multiple dimensions, delivering real time insights into customer needs
- Automated data transformation processes to deliver standardized reporting datasets and reduced manual overhead

Southern Adventist University June 2024 – August 2024
Software Engineer Intern Collegedale, TN
- Reengineered proprietary faculty planning and accountability tool using ASP.NET Core Blazor
- Assisted in modernizing UI/UX design of internal academic platform, utilizing C# and HTML
- Developed deeper competency and implementation skills related to server-side and client-side programming: fostered a dynamic environment for the application

Projects

Cadence
- Built a full-stack behavior tracking app with React, TypeScript, Next.js, NestJS, and PostgreSQL, enabling users to track task completion, visualize streaks, and analyze productivity metrics across various timeframes
- Designed a PostgreSQL database schema with Prisma ORM to automate daily task instance generation and track historical completion data for streak calculation and analytics
- Implemented JWT authentication and RESTful APIs using NestJS controllers to handle secure task CRUD operations and real-time data synchronization

Code Visualizer Tool
- Developed a web application for visualizing search and sorting algorithms for dynamic arrays utilizing React and TypeScript
- Designed a custom language for implementing different algorithms accompanied by real time visualization
- Enables users to create custom index variables binded to an array, step forward and back, and earn achievements based on time complexity and algorithm efficiency

CareerConnector
- Designed and implemented a job board platform empowering employers to manage job postings and streamline application reviews using ASP.NET and SQLite.
- Facilitated efficient job searching by enabling users to view, apply for, and filter listings based on criteria such as experience level and industry.
- Implemented employer management of job postings, applicant tracking, and streamlined application review.

Technical Skills

Languages: Python, C++, C#, C, Java, TypeScript, HTML5, CSS3, SQL

Frameworks/Tools: React, Tailwind CSS, Next.js, NestJS, PostgreSQL, Prisma, ASP.NET, Blazor, Flask, Git, GitHub, Docker
