WORK EXPERIENCE

Unum

Associate Software Engineer

June 2026-Present

- Developed .NET C# API for proprietary quoting software, integrating with a legacy DB2 database to automate RFP data retrieval, reducing RFP completion time from 27 to 12 minutes (55% reduction)
- Deployed and maintained containerized services on AWS ECS/ECR Fargate, integrating CloudWatch for monitoring and Secrets Manager for secure credential management
- Currently developing a .NET C# API to integrate with an internal rating system, aggregating data and exposing it to the consumer.

Scholar Intern

March 2025–June 2026

- Engineered a Python-based data automation pipeline to extract business day data from Teradata and sync it to an internal UI via GraphQL, eliminating manual entry for 700+ users
- Maintained and optimized financial platforms, improving reporting accuracy and reducing manual overhead

Southern Adventist University

Software Engineer Intern

June 2024–August 2024

- Reengineered proprietary faculty planning and accountability tool using ASP.NET Core Blazor, modernizing a legacy internal system
- Redesigned the UI/UX of an internal academic platform using C# and HTML, improving usability for faculty end users

EDUCATION

Southern Adventist University

B.A Computer Science

2022-2026

PROJECTS

Soundprint

- Building a full-stack dashboard for visualizing personal Spotify listening stats using Next.js, React, PostgreSQL, and Prisma
- Integrated Spotify's OAuth and Web API to pull real-time listening history and surface it through interactive stats and charts
- Designed a PostgreSQL schema with Prisma ORM to store and query historical listening data for trend analysis

Code Visualizer Tool

- Developed a web application for visualizing search and sorting algorithms for dynamic arrays utilizing React and TypeScript
- Designed a custom language for implementing different algorithms accompanied by real time visualization
- Enables users to create custom index variables binded to an array, step forward and back, and earn achievements based on time complexity and algorithm efficiency

SKILLS

- Languages: TypeScript, C#, Python, C++, C, HTML5, CSS3, SQL
- Frameworks / Tools: React, Tailwind CSS, Next.js, NestJS, PostgreSQL, Prisma, ASP.NET, Blazor, Flask, Git, Docker
- Cloud / Infra: AWS, ECS, ECR, Fargate, CloudWatch
