

Tadd Trumbull II

(623) 806-5230 | taddtrumbullii@gmail.com | github.com/taddmtii

EDUCATION

Southern Adventist University

Bachelor of Arts in Computer Science

Collegedale, TN

2022 – 2026

EXPERIENCE

Associate Software Engineer

June 2026 – Present

Unum

Chattanooga, TN

- Developed .NET C# API for proprietary quoting software, integrating with a legacy DB2 database to automate RFP data retrieval, reducing RFP completion time from 27 to 12 minutes (55% reduction)
- Deployed and maintained containerized services on AWS ECS/ECR Fargate, integrating CloudWatch for monitoring and Secrets Manager for secure credential management
- Currently developing a .NET C# API using AWS ECS/ECR to integrate with an internal rating system, aggregating data and exposing it to the consumer

Scholar Intern

March 2025 – June 2026

Unum

Chattanooga, TN

- Engineered a Python-based data automation pipeline to extract business day data from Teradata and sync it to an internal UI via GraphQL, eliminating manual entry for 700+ users
- Maintained and optimized financial platforms, improving reporting accuracy and reducing manual overhead

Software Engineer Intern

June 2024 – August 2024

Southern Adventist University

Collegedale, TN

- Reengineered proprietary faculty planning and accountability tool using ASP.NET Core Blazor, modernizing a legacy internal system
- Redesigned the UI/UX of an internal academic platform using C# and HTML, improving usability for faculty end users

PROJECTS

RunBench | *React, Next.js, TypeScript, Go, Prisma, PostgreSQL*

- Building a full-stack LeetCode-style coding platform for solving algorithm problems in the browser
- Designed and implementing automated test suite execution system that evaluates submitted code against multiple test cases and tracks runtime performance metrics
- Developing persistent user history tracking system to monitor problem-solving progress and performance analytics over time

Code Visualizer Tool | *React, TypeScript, Custom Language Design*

- Developed a web application for visualizing search and sorting algorithms for dynamic arrays utilizing React and TypeScript
- Designed a custom language for implementing different algorithms accompanied by real time visualization
- Enables users to create custom index variables bound to an array, step forward and back, and earn achievements based on time complexity and algorithm efficiency

Soundprint | *React, Next.js, Spotify API, OAuth*

- Building a full-stack dashboard for visualizing personal Spotify listening stats using React and Next.js
- Integrated Spotify's OAuth and Web API to pull real-time listening history and surface it through interactive stats and charts

TECHNICAL SKILLS

Languages: TypeScript, C#, Python, C++, C, HTML5, CSS3, SQL

Frameworks / Tools: React, Next.js, Tailwind CSS, NestJS, ASP.NET, Blazor, Flask, Git, Docker

Cloud / Infrastructure: AWS, ECS, ECR, Fargate, CloudWatch

Databases: PostgreSQL, Prisma
