Tadd Trumbull II

Software Engineer
(623) 806-5230 | taddtrumbullii@gmail.com | github.com/taddmtii

Experience

Associate Software Engineer | *.NET, C#, AWS ECS, SQL Server* June 2026 – Present
Unum *Chattanooga, TN*

- Developed a .NET REST API on AWS for proprietary quoting software, integrating with a legacy database to automate data retrieval, reducing quote completion time by 55% from 27 to 12 minutes
- Deployed and maintained containerized services on AWS ECS, integrating CloudWatch for monitoring and Secrets Manager for secure credential management
- Designed and implemented a .NET REST API on AWS to integrate with an internal rating system, enabling accurate rate generation based on customer inputs

Scholar Intern | *Python, Teradata, GraphQL* March 2025 – June 2026
Unum *Chattanooga, TN*

- Engineered a Python-based data automation pipeline to extract business data from Teradata and sync it with an internal UI via GraphQL, eliminating manual entry for 700+ users
- Maintained and optimized financial platforms, improving reporting accuracy and reducing manual overhead

Software Engineer Intern | *ASP.NET Core Blazor, C#, HTML* June 2024 – August 2024
Southern Adventist University *Collegedale, TN*

- Reengineered proprietary faculty planning and accountability tool using ASP.NET Core Blazor, modernizing a legacy internal system for unit planning
- Redesigned the UI/UX of an internal academic platform using C# and HTML, improving usability for faculty end users

Projects

RunBench | *React, Next.js, TypeScript, Go, Prisma, PostgreSQL, Docker*

- Building a full-stack coding platform for solving algorithmic problems in the browser
- Designing and implementing automated test suite execution system that evaluates submitted code against multiple test cases and tracks runtime performance metrics
- Developing persistent user history tracking system to monitor problem-solving progress and performance analytics over time

Code Visualizer Tool | *React, TypeScript, Custom Interpreter, AST*

- Developed a web application for visualizing program execution utilizing React and TypeScript
- Created a custom language and interpreter for implementing different algorithms accompanied by real time visualization
- Enables users to step forward and back through their code and switch between learning modes for different interactivity

Soundprint | *React, Next.js, Spotify API, OAuth*

- Built a full-stack dashboard for visualizing personal Spotify listening stats using React and Next.js
- Integrated Spotify's OAuth and Web API to pull real-time listening history and surface it through interactive stats and charts

Education

Southern Adventist University Collegedale, TN
Bachelor of Arts in Computer Science *2022 – 2026*

Technical Skills

Languages: TypeScript, C#, Python, Go, C++, C, HTML5, CSS3, SQL
Frameworks / Tools: React, Next.js, Tailwind CSS, ASP.NET, Blazor, Flask, Git, Docker
Cloud / Infrastructure: AWS, ECS, ECR, Fargate, CloudWatch, Terraform
Databases: PostgreSQL, SQL Server, SQLite
